Library Book Loan System Project Plan

1 Introduction

This Project Plan provides the general framework and establishes specific strategies and milestones for execution of the Library Book Loan System project. The PP will define the project's requirements and expectations. This is a living document and will be updated as required.

2 Project organization

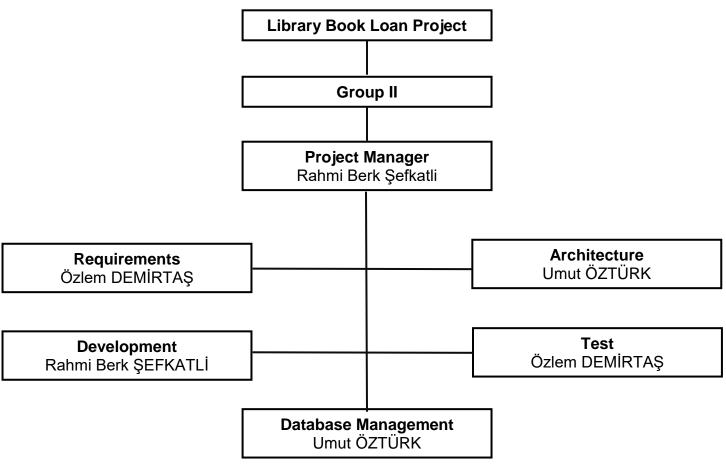

Figure I Project Organization

This section has been supplied to add clarity to the organization and to identify current reporting relationships and responsibilities.

Library Book Loan System	Group II
Project Plan	Date: 02/03/2017

The project members are Özlem DEMİRTAŞ, Rahmi Berk ŞEFKATLİ and Umut ÖZTÜRK. The project is divided into six main roles. These roles are responsible for different stages of the project and each role has a leader and helpers. This way we try to divide the work equally among the group members.

3 Project practices and measurements

Productivity of group members (hour / week) involved in project will be measured as project metric. Estimated effort distribution for the project task can be seen in Figure III and Figure III.

Tasks	Date Range	Work Load (week)	Hour/Work
Project Management	28/02/2017 - 16/05/2017	11 week	along the project
Requirements	28/02/2017 - 14/03/2017	2 week	10 hour/week
Architecture	14/03/2017 - 04/04/2017	3 week	9 hour/week
Database Management	14/03/2017 - 04/04/2017	3 week	4 hour/week
Development	04/04/2017 - 25/04/2017	3 week	15 hour/week
Test	25/04/2017 - 16/05/2017	3 week	7 hour/week

4 Project milestones and objectives

Iteration	Primary objectives (risks and use case scenarios)	Scheduled start or milestone	Target velocity
11	Software Vision & Project Plan		
	Risk: Target work hours for some tasks can be underestimated.	28/02/2017 _	10 hours
	Mitigate Risk: Having proper vision and plan documents minimizes the confusion between stakeholders and provides a better workflow.	7/03/2017	To modic
	Software Requirements Document		
12	Risk: Requirements may be too hard for the developer team to implement.	7/03/2017	10 Hours
	Mitigate Risk: Having extensive documentation prevents confusion about the requirements.	14/03/2017	TO Hours
	Architectural Notebook & System Test Case Definitions		
13	Risk: If project members do not discuss test cases with clients, unexpected situations may arise about the project.	14/03/2017 –	9 hours
	Mitigate Risk: Having the required test cases documented makes sure that every test case is satisfied.	04/04/2017	
	Software Design Description & Coding Standard		
14	Risk: Not choosing an appropriate programming language can make project implementation unnecessarily hard.	04/04/2017 –	15 hours
	Mitigate Risk: Having a good software design, programming language and IDE can make project implementation easier.	25/04/2017	
15	Software Test Report		
	Risk: Not properly testing components can result to unreliable situations.	25/04/2017 –	7 hours
	Mitigate Risk: Project tests should be done by test experts. Doing software tests in detail can eliminate unexpected behaviors.	16/05/2017

5 Deployment

The finished product will be available for download from the GitHub repository along with a brief explanation about how to use the program. After installation, detailed user guide will be provided to users. Updates can also be downloaded from the same repository.

6 Lessons learned

While preparing this document, we learned

- I. To identify activities and tasks needed to produce each of the work packages,
- II. To define roles and responsibilities,
- III. To divide up responsibilities among the project members according to their abilities,
- IV. To estimate how long it will take to complete each task,
- V. To estimate cost of each task, using an average hourly rate for each role.
- VI. To consider how much time each group member can realistically devoted to this project,
- VII. To develop a schedule.
- VIII. To mark specific points along a project timeline,
- IX. To minimize the risk problems with thinking in detail.
